USER INTERFACE DESIGN

EXPERIMENT – 4

Topic: Familiar and Unfamiliar version

NAME: ARUNPRANESH.ES
ROLL NO: 240701051

I developed a prototype using Proto.io to incorporate both familiar and unfamiliar navigation elements in a Food Ordering Application. The aim of this experiment is to evaluate the ease of use among different user groups by comparing common navigation patterns with experimental navigation techniques.

The prototype consists of six screens: three screens for the familiar version (entry,activity,progress,logout) and three screens for the unfamiliar version (entry,activity,progress,logout).

Familiar and Unfamiliar Navigation in UI/UX Design

Familiar Navigation refers to design elements that users commonly see in mobile applications. These are easy to understand and require no special learning.

Familiar Version

1. Entry Section (Login Page)

Elements Used:

- **App Title (Fitness Tracker)**
- **Username Text Field**
- **Password Field**
- **Log In Button**
- **Forgot Password Link**
- **Background Gradient**

---

2. Activity Section (Dashboard)

Elements Used:

- **Header Bar**
- **Profile Icon**
- **Notification Icon**
- **Steps, Calories, Distance Stats**
- **Start Workout Button**
- **Activity Menu (Workout, Progress)**

---

3. Workout Section

Elements Used:

- **Header Title**
- **Timer Display**
- **Status Indicators**
- **Circular Progress Graphic**
- **Pause Button**
- **Stop Button**
- **Finish Workout Button**

---

4. Progress Section

Elements Used:

- **Header Bar**
- **Trophy / Achievement Icon**
- **Level Indicator**
- **Progress Details (Steps, Calories, Workouts)**
- **Checkmark Icons**

---

5. Logout Section

Elements Used:

- **Success Icon**
- **Confirmation Message**
- **Back to Dashboard Button**
- **Back to Login Button**

Unfamiliar Version

1. Entry Section

Elements Used:

- **App Title**
- **Microphone Icon**
- **Voice Login Option**
- **Swipe Gesture Instruction**

---

2. Workout Section

Elements Used:

- **Header Navigation**
- **Swipe to Start Instruction**

- **Running Animation**
- **Gesture Indicator**

Conclusion

The familiar navigation was easier and more efficient for most users. The unfamiliar swipe-based navigation required more effort and learning. Therefore, familiar navigation patterns improve usability and user experience.
